

OLDE CYPRESS LAKES

There are 13 lakes in our Olde Cypress community that are an integral part of our stormwater management as well as our landscaping irrigation which the MPOA and Club jointly manage. The ponds in Lantana and DaVinci are not included in the 13 lakes and are the responsibility of the Lantana and DaVinci Homeowners Associations. Our lakes are a critical part of what makes Olde Cypress a beautiful community. The Lake in the rear of the Clubhouse only supplies water for the irrigation of the entire golf course and Clubhouse area. Several of the other lakes are used to provide water for our home landscaping irrigation. The quality of the lake water is routinely monitored by the MPOA and Club with appropriate action taken as necessary to maintain an acceptable water quality.

Irrigation to our homes is provided by the Neighborhood HOA (NHOA) that we live in. Any home irrigation issues should be directed to your NHOA.

The lakes also are a critical part of stormwater management in our community. Many of the lakes are interconnected to allow for the maximum amount of onsite stormwater retention. When the amount of stormwater exceeds the storage capacity of the lakes, stormwater will flow to the lake on the west side of Logan Blvd at the Immokalee canal and ultimately flow into the canal

Maintaining our lakes in good condition is key to their longevity for stormwater retention, irrigation supply and aesthetic beauty. We employ a lake management company to provide technical support.

Please remember that whatever we put on our lawns and driveways will end up in our lakes during the next rainfall event. Please do your part to keep our lakes clean and beautiful for all of our residents to enjoy.
